CDN & Cloud Security services game-changer enters India; more economical features

A new player in a currently cluttered market of CDN started its services in India early June 2020. ArvanCloud, a new comer in the field, has successfully offered competitive CDN and cloud security solutions in Europe, Australia and the Middle East before entering India.

ArvanCloud, an international cloud service provider, entered India by launching two CDN PoP sites in New Delhi and Pune, early June 2020. The company aims to provide Indian websites and online businesses with cutting-edge technology, more security, cost-effective solutions and more features comparing to competitors.

Meanwhile ArvanCloud announced that following expansion of its CDN infrastructures, it will launch new PoP sites in Indian mega cities including Mumbai, Bangalore, and Chennai in the near future. "Covid-19 pushed almost all business sectors to go online especially small and medium-sized businesses" ArvanCloud press release reads, "it is important for ArvanCloud to offer its services in countries that enjoy more home-based services or products, in order to facilitate use of cloud services for everyone
and help these businesses to rapidly recover."

Having more than 40 PoP sites in important locations around the world including Europe, Australia, East Asia, central Asia and Middle East, ArvanCloud provides economical, secure and

cutting-edge CDN and cloud security services. ArvanCloud solutions are provided to customers in more than 38 countries. Anycast network, Web Acceleration, DDoS Protection, Waf, Firewall, Video CDN, and Live Streaming are among ArvanCloud solutions. Comparing to its competitors, the company offers most of its features free of charge and on pay-as-you-go plans.

The company provides many solutions with several features in its free tier. They include Managed DNS with unlimited traffic and Advance DDoS Protection, full features of CDN solution up to 50 GB in every geographical region (Europe, Austria, Asia, America), Cloud Security services, and full features of Video CDN (VoD streaming) up to 10 GB.

ArvanCloud's integrated infrastructure would enable Indian websites and online businesses to manage their domains' DNS free of charge, fast and secure. It also helps them through its CDN platform to deliver their website content to an unlimited number of audiences around the world from the nearest geolocation that would decrease loading-time and maintain best quality.

After launching two CDN PoP sites in New Delhi and Pune, ArvanCloud said that its Mumbai CDN PoP-site would be launched by end of July 2020, while Bangalore and Chennai CDN PoP-sites will be operational by end of August.
